

Weekly Reporting For Processing Vegetative Debris ~ MANDATORY!

In an effort to ensure processors are adhering to DEQ statutory requirements and to monitor debris reduction, the Debris Management Team has developed a reporting form for vegetative debris and instruction sheet for processors of hurricane debris. See following attachments:

[Instructions for Completing the Weekly Debris Management Report](#)

[Weekly Debris Management Report FORM](#)

In accordance with SB 583 (Act 662) of the 2006 Louisiana Legislative Session, vegetative Hurricane debris falls outside of any existing LDAF BMP program and must be handled according to LDEQ procedures outlined in our debris management plan. Please see the official confirmation from the Department of Agriculture below.

[Dept. of Agriculture - Debris Issues Related to Hurricane Gustav - 9/10/08](#)

Grinding and/or chipping of vegetative debris and composting of the material ~ Plan approved composting requires the initial step of reducing the vegetative debris by grinding or chipping. Allowing vegetative debris to remain in place without any processing for any reasonable time period shall constitute disposal by the department. Safe and effective composting also requires routine maintenance as outlined in the plan (page8-9) in order to minimize environmental hazards.
